

ENERGY POLICY

Our company **ELECTROVAM SA** has been active for many years in electrostatic coating of iron pieces, aluminum profiles, as well as in the wood finishing of aluminum profiles, based in our facilities on **Patriarchou Athinagora 2, Oraiakastro, Thessaloniki**.

To achieve our main goal, which is to reduce the energy footprint of the company's production activity, the Management is committed to:

- The company's full compliance with legal, regulatory and other requirements regarding energy efficiency, energy use and energy consumption,
- The provision of any necessary resource and/or information to achieve corporate energy goals and objectives,
- Responding to the requirements and expectations of the interested parties in matters of energy management,
- The evaluation of critical and important supplies for the operation of the company during business planning, in the light of the possibility of improving energy performance, and
- Full support in the implementation of corporate energy programs.

The above are to be achieved through:

- the implementation and continuous improvement of the Energy Management System, which was developed according to the ISO 50001 standard,
- the determination of specific energy monitoring indicators,
- monitoring and measuring the critical energy aspects of the company,
- defining, implementing and updating energy programs,
- the supply of energy-efficient products and services affecting energy performances,
- raising the awareness of all participants in the company's energy performance with continuous training aiming at the development of an Energy culture, and
- Regular reviews of the Energy Policy and its thereafter communication.

As Management, we are committed to the regular review of our energy goals and programs with the aim of continuously improving our energy performance.

For the Administration,

Thessaloniki, 01-11-2022

EFTHYMIOS ILIADIS
Chief Executive Officer
